

Description (move-item):

The move-item cmdlet moves an item, including its properties, contents, and child items, from one location to another location. The locations must be supported by the same provider.

Syntax:

Move-Item

```
[-Path] <String[]>  
[[-Destination] <String>]  
[-Force]  
[-Filter <String>]  
[-Include <String[]>]  
[-Exclude <String[]>]  
[-PassThru]  
[-Credential <PSCredential>]  
[-WhatIf]  
[-Confirm]  
[<CommonParameters>]
```

Example:

```
Move-Item -Path C:\test.txt -Destination E:\Temp\tst.txt  
Move-Item -Path C:\Temp -Destination C:\Logs
```

Description (copy-item):

The copy-item cmdlet copies an item from one location to another location in the same namespace. For instance, it can copy a file to a folder, but it can't copy a file to a certificate drive.

Syntax:

Copy-Item

```
[-Path] <string[]>  
[[-Destination] <string>]  
[-Container]  
[-Force]  
[-Filter <string>]  
[-Include <string[]>]  
[-Exclude <string[]>]  
[-Recurse]  
[-PassThru]  
[-Credential <pscredential>]
```

[-WhatIf]
[-Confirm]
[<CommonParameters>]

Example:

Copy-Item "C:\Wabash\Logfiles\mar1604.log.txt" -Destination "C:\Presentation"
Copy-Item -Path "C:\Logfiles*" -Destination "C:\Drawings" -Recurse
